At Alexandre FrontAir Congress Hotel, we believe that true hospitality cares for both our guests and the environment around us. That is why we work every day to minimise our environmental impact and make a positive contribution to our local community.

Here are some of the good practices we currently put into place:

- **Energy-efficient lighting:** 100% of our facilities use low-consumption LED technology and automated lighting with presence sensors in communal areas.
- **Domestic hot water (DHW) using aerothermal energy:** We have installed high-efficiency aerothermal systems to produce hot water in the facilities in our padel area and in staff areas, significantly reducing CO_2 emissions and energy consumption.
- **Water conservation:** All our showers and taps are fitted with flow restrictors to optimise water consumption without compromising your comfort.
- **No single-use plastics:** We have replaced individual amenity bottles with refillable dispensers for eco-friendly, biodegradable toiletries.
- **Filtered water:** The restaurant serves filtered water in reusable glass bottles, and the spa area has a filtered-water dispenser.
- **Comprehensive recycling:** We sort and properly manage all waste generated (paper, glass, packaging, organic waste and used oils).
- **Fighting food waste:** We plan our purchasing and menus to minimise food waste.
- **Inclusive internship programme:** We actively welcome and train people with disabilities through work placements as room attendants. We firmly support equal opportunities, professional training, and social and employment inclusion within the hospitality sector.
