GOOD ENVIRONMENTAL PRACTICES

At Alexandre Hotel Gala, we are committed to protecting the environment, supporting our local community and promoting responsible management. Over the past few years, we have implemented various initiatives to reduce our environmental impact and encourage more sustainable tourism.

Below are some examples of our commitment in action:

- **Local Community Impact**: We work to reduce food waste while ensuring food safety and legal compliance. We also support social initiatives within our community by donating to food banks, soup kitchens and other authorised organisations.
- **Paper Reduction**: In recent years, Alexandre Hotel Gala has been committed to reducing paper consumption. We have installed information screens in strategic locations and replaced printed flyers containing information about hotel services with QR codes, thereby promoting efficient digital communication.
- **Cultural Identity**: Our team encourages guests to explore the island's less touristy areas and experience its authentic local character. We recommend activities ranging from sampling traditional Canarian cuisine to discovering the island's rich cultural and historical heritage.
- **Recycling:** Over the past few years, we have progressively introduced recycling bins in both guest common areas and staff facilities. Today, all our facilities are equipped with sufficient recycling containers and bins to ensure proper waste management.
- **Promoting Public Transport:** We provide our guests with information to encourage the use of public transport whenever possible. Our large reception screen displays information about the public transport operator, including a QR code that allows guests to access timetables and find the routes that best suit their needs.
- **Locally Produced Water Bottles:** We have replaced single-use plastic water bottles with reusable bottles produced locally, thereby reducing the carbon footprint associated with their manufacture and transportation.
- **Water Conservation and Renewable Energy:** We have installed water-saving devices in taps and toilet cisterns to reduce water consumption. Our gardens are equipped with a drip irrigation system, and hot water is generated using solar thermal panels. We also use clean energy generated by photovoltaic solar panels.
- **Additional Energy-Saving Measures:** We use energy-efficient lighting throughout the hotel and have installed key-card systems and switches to deactivate air conditioning in guest rooms when appropriate, helping to reduce energy consumption.
